

DESIGN THINKING PROJECT

AI-Driven Business Management and Growth Platform for Small and Medium Enterprises

TEAM LEAD : ASHWATHADITHYA GR (927625BAD013)

MEMBER 1 : ARJUN S(927625BAD012)

MEMBER 2: ABISHEAK S(927625BAD004)

PROBLEM STATEMENT:

- Small goods transport operators often depend on manual records or multiple applications.
- Managing trips, customers, income, expenses, and vehicle maintenance separately is difficult.
- Small businesses may not be able to afford dedicated Data Analysts or Data Scientists.
- Owners may struggle to understand profit, loss, unnecessary expenses, and overall business performance.
- There is a need for an affordable, integrated, AI-assisted system to support better business decisions.

Existing System:

- Small businesses mainly depend on manual records, notebooks, spreadsheets, or basic applications
- Existing systems mostly focus on accounting, billing, and expense tracking rather than complete business management.
- Transport operators often use separate methods/tools for trips, vehicles, customers, maintenance, and finances.
- Large companies can employ Data Analysts/Data Scientists, but this can be unaffordable for small MSMEs.

Proposed System:

- **AI Business Analyst:** AI analyzes business data, identifies profit/loss patterns, and provides personalized suggestions for improvement.
- **Business Growth Suggestions:** AI recommends ways to reduce expenses, increase profit, improve operations, and plan future business growth.
 - **Smart Vehicle Monitoring:** Uses IoT/sensor data to monitor vehicle performance in real time and AI to provide maintenance, efficiency, and cost-saving suggestions.
- **Customer & Smart Planning System:** Provides a customer portal for trip/payment transparency along with savings planning, maintenance alerts, reminders, and data-driven decision support.

HARDWARE & IOT COMPONENTS

GPS Module
Real-time location & distance tracking

Speed Sensor
Captures vehicle speed (km/h)

Fuel Level Sensor
Monitors fuel level in real time

OBD-II Connector
Engine data, RPM, battery, fault codes

Vibration Sensor
Detects excessive vibration / impact

Temperature Sensor
Engine temperature monitoring

IOT DEVICE (ON BOARD UNIT)

4G / 2G Network

CLOUD SERVER

- Secure Data Reception
- Data Storage
- Data Processing
- AI Analytics Engine
- API Services

DATA FLOW

WEBSITE / DASHBOARD

BizAI

TRENDS

AI SUGGESTIONS

High Speed Alert Speed is above normal limits for 20% of the time today.	Suggestion: Maintain speed below 60 km/h to save fuel.	>
Fuel Efficiency Fuel consumption is 18% higher than usual.	Suggestion: Avoid idling and sudden acceleration.	>
Maintenance Engine temperature is slightly high.	Suggestion: Check coolant level and radiator.	>
Cost Saving Potential savings if suggestions are followed.	Estimated Saving: ₹ 3,250 / month	>

VEHICLE (TATA ACE / GOODS CARRIER)

BENEFITS

SYSTEM OVERVIEW

Thank
you

The image features the words "Thank you" in a dark blue, elegant script font. The text is centered and has a slight 3D effect with a white drop shadow. Surrounding the text are various decorative elements: a pink flower with a dark blue center at the top left; a yellow crescent moon and a small orange star near the top of the 'T'; a red heart and a small teal leaf near the 'a' in 'Thank'; a large pink flower with a dark blue center to the right of 'you'; a yellow star and a small orange arc below 'you'; and several other small stars and arcs in blue, orange, and teal scattered around the letters. The entire graphic is set against a light beige background.
